

As you are aware, there is a concerted effort in many countries in Europe to disinfect public spaces in a proactive approach to support the spread of disease at this crucial time.

FOGGING / MISTING WITH SURFACE SPRAY COMMERCIAL GRADE **DISINFECTANT & PROTECTANT**

Misting with a chemical sprayer is an effective way to disperse sanitising chemicals. Requiring minimal effort, misting quickly delivers disinfectant to large surface areas, as well as to hard-to-reach corners and crevices, all-the-while providing better coverage than using the traditional spray/wipe method of cleaning. The advantage of using misting to apply the disinfectant, is to achieve a consistent application across surfaces and hard to reach areas that the normal cleaning regime may not be able to get to.

Netbiokem Surface Sanitiser is a simple and effective way to kill bacteria and Protect surfaces for up to 30 days. It eliminates odour-causing bacteria and inhibits mould and mildew. Allowing the product to dry will also coat the surface with a microscopic protective layer for continuous protection. It is ideal for use around children, pets and plants.

We are able to support local businesses, schools and transport by offering a broad spectrum fogging / misting treatment to common areas, External areas, carparks and play equipment.
